

When buses talk, kids listen!

The **Child Safety Alarm System**[™] helps save lives and lower liability.

Wherever school buses operate, there is a risk that children can be hurt or killed. Every year, children lose their lives because they didn't know the bus was coming or that it was about to move. Furthermore, in the event of an accident, bus drivers and parents, as well as the school system, can face emotional and financial ruin. Now, you can change that. By easily adapting your buses with the **Child Safety Alarm System**, you can save lives and lower your liability.

The **Child Safety Alarm System** is an advanced voice alarm system that actually talks to and alerts the children with three distinct, clear and loud voice messages. The messages can be programmed in any manner devised by the school district. Some suggestions follow:

- 1) "Stay back! Stay back, until the bus stops!"
- 2) "Look to the driver for a signal to exit or enter the bus. Watch your step!"
- 3) "Warning! Stand back! Stand back! This bus is about to move!"

Additionally, the **Child Safety Alarm System** is:

- Easy to install — typically takes only 15 minutes
- Cost-effective — you can afford to equip your entire fleet
- Simple to operate — adds peace of mind for your drivers without extra effort
- Able to hold red lights for 6-9 seconds
- Programmable in any language/voice or can record alternate languages/voices sequentially within each voice segment

The **Child Safety Alarm System** is already in use on thousands of buses across the country. Don't wait another second. Listen to the voice of reason, especially when it's coming from a talking bus!
